

More observations recover missing directions but do not eliminate feasible over-selection

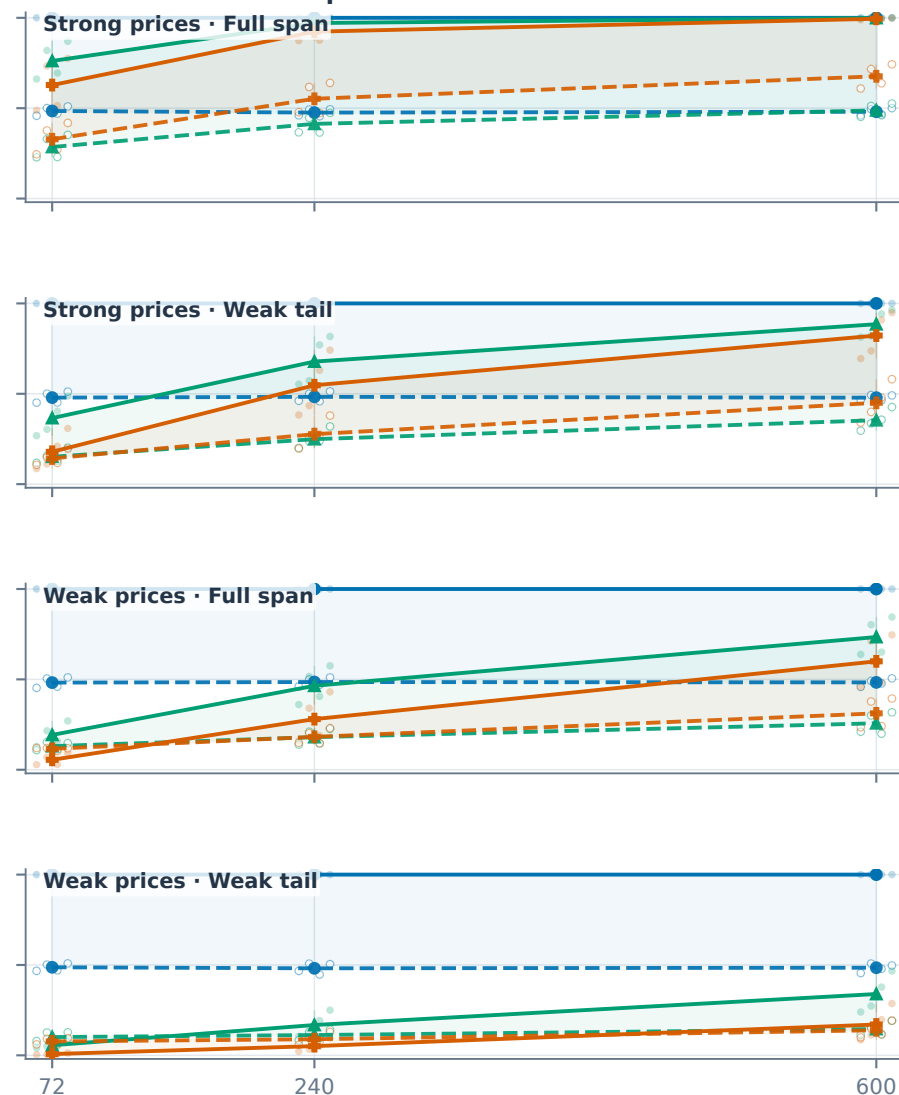

Exact recovery probability

● true $K_0=1$ ▲ true $K_0=3$ ◆ true $K_0=5$ — oracle evaluation - - feasible evaluation • asset-count × geometry cell

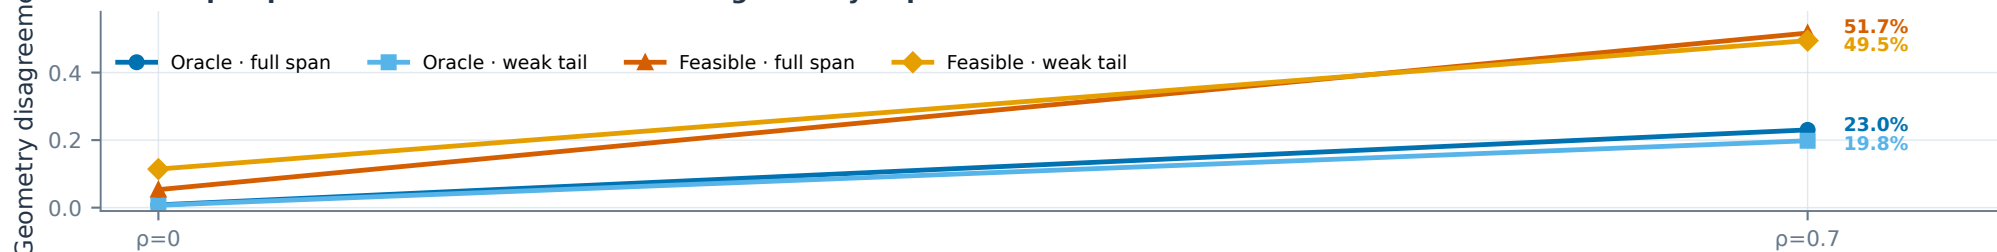

A Factor correlation $\rho=0$

B Factor correlation $\rho=0.7$

C Two prespecified correlation levels reveal geometry dependence

Each trajectory averages two asset counts and two pricing geometries; shaded gaps separate oracle from feasible evaluation.
